

Problem Title: Cloud Studio HUB

Working in an EdTech Company can be challenging, you come across a lot of problems when a new freshly brewed content is being prepared, released, or worked upon. In these critical times a project manager has the key responsibilities:

- a) To check for a new video when it is being uploaded
- b) To collect down all the useful content required to make a project a success
- c) To make sure that your team is happy with you and you know how to get their attention even at most depressing times.
- d) To be a leader and understand that time is as valuable as anything else (Save time)

We have listed down a set of problem statements that you need to automated to make sure you and your team achieve the goals on time

All the best!

You are working at Internship Studio as a cloud system integrator. Everyday problem with the media team is that its very hard to keep a track of the following:

a) Automate YouTube

1. (Telegram Challenge) New videos being uploaded by any specific youtube channel and want to send a notification on Telegram group and make an excel sheet for the sales team
2. (Gmail Challenge) New video is uploaded by Internship studio on their channel (because there are multiple people to upload the video) and list all of them for the sales team in an excel sheet again.

b) Daily Scrums

1. (EverNote Automation) Every Monday: Simon (CEO of the company) Wants to automate the process of making the to-do list, so he wants to make sure that he can say it to Alexa and it adds it to Evernote, and make a common list for everyone.
2. (Github Automation) Aman who is working as a software developer is leading the team and wants to send out emails to all the developers under him whenever there is any change in the Github Repository.
3. (Google Sheet) The attendance in the office is purely physical presence-based, so we want to make sure that whenever anyone says, "Present *name— The sheet should separate the name and makes a list out of it.
